

Inauguration Ceremony of I.T Data Center

Information Technology Department (Thatta Cement Company Limited)

Introduction to Data Center

Data center is the integration of information technology (IT) and facility management disciplines to centralize monitoring, management and intelligent capacity planning of a data center's critical systems, achieved through the implementation of specialized software, hardware and sensors. Data Center enables common, real-time monitoring and management platform for all interdependent systems across IT and facility infrastructures. Depending on the type of implementation, Data Center products can help data center managers identify and eliminate sources of risk to increase availability of critical IT systems. Data Center

products also can be used to identify interdependencies between facility and IT infrastructures to alert the facility manager regarding the gaps in system redundancy, and provide dynamic, holistic benchmarks on power consumption and efficiency to measure the effectiveness of "green IT" initiatives.
